SUMMARY

A versatile Software Engineer with nearly 3 years of experience specializing in scalable web architectures and high-performance AI/Computer Vision systems. Driven by clean code and problem-solving, I transform complex technical challenges into impactful, real-time software solutions.

SKILLS

- **Programming Languages:** Java, TypeScript, JavaScript, Erlang, C++17, Golang
- **Backend & Middleware:** Spring Boot, Nest.js, Node.js, Quarkus, OSGi, Apache Kafka, ActiveMQ
- **Frontend Frameworks & UI:** React.js, Next.js, Angular.js, Tailwind CSS, Bootstrap, MUI
- **Databases & Caching:** PostgreSQL, MySQL, MSSQL, MongoDB, Redis, Qdrant
- **Cloud & DevOps:** AWS (EC2, ECS/EKS, S3, RDS), Docker, Jenkins, GitHub Actions
- **Tools and Environments:** Git, SVN, SonarLint, Postman, Figma, DBeaver, Linux, Power BI, SoapUI
- **Languages:** English (Intermediate), Korean (TOPIK 4)

EDUCATION

FPT University

Software Engineer | 09/2019 - 12/2023

GPA: 8.4/10 - Very Good

FPT Software Academy

Korean Bridge Software Engineer | 09/2022 - 12/2023

GPA: 9.0 (Scholarship recipient)

CERTIFICATIONS & SCHOLARSHIPS

- OCP Java SE 17 Developer (1Z0 - 829) - Oracle
- TOPIK 4 - National Institute for International Education
- 100% Scholarship - Korean Bridge SE program, FPT Academy

WORK EXPERIENCE

FPT Software

Developer Full-time | 12/2023 - 05/2026

Viettel Hightech

Onsite Developer Full-time | 03/2026 - 05/2026

PROJECTS

Telecommunications Core Routing System

Viettel | 03/2026 - 05/2026

- **Technologies:** Erlang, Java Quarkus, Mnesia, MySQL, Linux (Server Simulation)
- **Description:** Optimized real-time communication flows and core business logic for a high-concurrency telecom system using **Erlang** and **Java**. I managed distributed data with **Mnesia** and **MySQL**, simulated **Linux** environments to test routing logic and ensure system fault tolerance.

Honda Digital User Manual Redesign

FPT Software | 02/2026 - 03/2026

- **Technologies:** React.js, JavaScript, Tailwind CSS
- **Description:** Modernized Honda's digital documentation platform using **React.js**. I transformed legacy manuals into a responsive, intuitive web interface to improve content discoverability and overall user experience.

Project KPI Analytics Platform

FPT Software | 01/2026 - 02/2026

- **Technologies:** Power BI, DAX, Power Query, Data Lake Integration
- **Description:** Designed interactive **Power BI** dashboards and robust semantic models to monitor departmental project KPIs in real-time.

SecuxperDP

LG CNS | 09/2025 - 12/2025

- **Technologies:** Java Spring Boot, Next.js, PostgreSQL, MongoDB, Jenkins, SonarLint, Docker
- **Description:** Spearheaded the full-stack architecture for the LGCNS ecosystem, utilizing **Java Spring Boot** for robust core backend modules and **Next.js** for high-performance frontend interfaces. I developed essential cross-cutting features, including user management and dynamic localization, ensuring seamless integration and high code quality through strict CI/CD pipelines.

Smart Connect

LG CNS | 04/2024 - 09/2025

- **Technologies:** Java (OSGi Framework), ActiveMQ, Docker, Linux
- **Description:** Built a robust middleware using **Java** and **ActiveMQ** to bridge web platforms with biometric authentication devices, enabling real-time, bi-directional data synchronization.

IDP Plus

LG CNS | 12/2023 - 03/2024

- **Technologies:** Java Spring Boot, Angular.js, PostgreSQL, MongoDB, Redis, Jenkins, SonarLint
- **Description:** Developed scalable RESTful APIs with **Java Spring Boot** to manage LG Group's organizational data, including employee records and global facilities.

Camera AI Surveillance System

06/2025 - 05/2026

- **Technologies:** C++17, NVIDIA DeepStream, Triton, Kafka, Qdrant, Docker, Kubernetes, Golang
- **Description:** Engineered a high-performance, real-time face recognition system for IP cameras using **C++17**, **NVIDIA DeepStream**, and **Triton**. I architected a scalable video processing pipeline to handle continuous RTSP streams, integrating **Kafka** for event streaming and **Qdrant** for high-speed vector search, with the entire infrastructure orchestrated via Kubernetes.
