

# Pham Quang Huy

Software Engineer | Fullstack & AI Real-time Systems

Hanoi | +84986865089 | huyppq1801@gmail.com | [linkedin.com/in/huypham102](https://www.linkedin.com/in/huypham102) | Portfolio: [hyunk.site](https://hyunk.site)

## SUMMARY

---

Software Engineer with nearly 4 years of experience building backend services, real-time systems, and enterprise web platforms. Experienced in Java Spring Boot, OSGi, RESTful APIs, PostgreSQL, MySQL, MongoDB, Redis, Kafka, Docker, Linux, Jenkins, and Git. Strong background in designing reliable backend services, asynchronous messaging, authentication, database integration, and production deployment. Also experienced with C++17 and high-performance real-time systems.

## EDUCATION

---

### FPT University

Software Engineer | 09/2019 – 12/2023

GPA: 3.5/4.0 – Very Good

## WORK EXPERIENCE

---

### FPT Software

Software Engineer | 09/2022 – Present

## CERTIFICATIONS & SCHOLARSHIPS

---

- OCP Java SE 17 Developer (1Z0-829) – Oracle
- TOPIK 4 - National Institute for International Education
- 100% Scholarship - Korean Bridge SE program, FPT Academy

## SKILLS

---

- **Backend:** Java, Spring Boot, Quarkus, OSGi, RESTful APIs, Microservices, JWT, NestJS
- **Messaging & Caching:** Kafka, ActiveMQ, Redis
- **Databases:** PostgreSQL, MySQL, MongoDB, Mnesia
- **DevOps:** Docker, Jenkins, GitHub Actions, Linux, Basic AWS
- **Frontend:** ReactJS, Next.js, AngularJS
- **Programming Languages:** Java, C++17, TypeScript/JavaScript, Erlang, Basic Python
- **AI/Streaming:** NVIDIA DeepStream, Triton, GStreamer, RTSP
- **Tools:** Git, SVN, SonarLint, Postman, DBeaver, Power BI, SoapUI
- **Languages:** English (Intermediate), Korean (TOPIK 4)

## PROJECTS

---

### SecuxperDP | Fullstack Developer

FPT Software – LG CNS Client Project

**Technologies:** Java Spring Boot, Next.js, PostgreSQL, MongoDB, Jenkins, SonarLint, Docker, JWT

Contributed to an enterprise web platform, focusing on backend services, authentication, secured **RESTful APIs**, and frontend integration.

- Developed **Java Spring Boot** backend services for user management, authentication, and role-based access control.

- Designed and integrated secured **RESTful APIs** using **JWT** authentication and authorization.
- Worked with **PostgreSQL** and **MongoDB** for relational business data and configuration storage.
- Built **Next.js** frontend features and integrated them with backend APIs.
- Supported CI/CD and code quality workflows using **Jenkins**, **Docker**, and **SonarLint**.

## **IDP Plus | Fullstack Developer**

*FPT Software – LG CNS Client Project*

**Technologies:** Java Spring Boot, AngularJS, PostgreSQL, MongoDB, Redis, Jenkins, SonarLint

Developed internal enterprise features for employee and department data management.

- Built **Java Spring Boot** APIs for internal business modules.
- Developed **AngularJS** admin interfaces and integrated them with backend services.
- Worked with **PostgreSQL**, **MongoDB**, and **Redis** for data storage and application support.
- Supported code quality and delivery workflows using **Jenkins** and **SonarLint**.

## **Smart Connect | Backend/Middleware Developer**

*FPT Software – LG CNS Client Project*

**Technologies:** Java, OSGi, ActiveMQ, C++ Native Library Integration, Docker, Linux

Built **Java**-based middleware services for integrating biometric authentication devices with enterprise platforms through asynchronous messaging.

- Designed **Java OSGi** middleware modules to connect biometric devices with enterprise systems.
- Implemented **ActiveMQ**-based asynchronous messaging flows for device events, authentication results, and status updates.
- Integrated native **C++** libraries with **Java** services for biometric processing workflows.
- Debugged message routing, device synchronization, and deployment issues in **Docker /Linux**.

## **Telecommunications Core Routing System | Backend Developer**

*FPT Software – Viettel High Tech (Onsite)*

**Technologies:** Erlang, Java, Quarkus, Mnesia, MySQL, Linux

Worked on a high-concurrency telecom core routing system for real-time communication flows and routing business logic.

- Implemented and optimized routing business logic using **Erlang** and **Java Quarkus**.
- Managed distributed runtime data with **Mnesia** and persistent business data with **MySQL**.
- Simulated **Linux**-based testing environments to validate routing scenarios and fault-tolerance behavior.

## **Honda Digital User Manual | Frontend Developer**

*FPT Software – Honda Client Project*

**Technologies:** ReactJS, NestJS, Tailwind CSS

- Rebuilt legacy digital manual pages into a responsive **React**-based interface.
- Developed **NestJS** APIs to serve structured documentation content and support frontend integration.

## **Camera AI Surveillance System | C++/AI Backend Engineer**

*FPT Software*

**Technologies:** C++17, NVIDIA DeepStream, Triton, GStreamer, Kafka, Redis, Qdrant, Docker, Golang, Linux

Developed a real-time AI camera system for face recognition, face embedding search, and metadata streaming on NVIDIA GPU-based **Linux** servers.

- Built real-time event and metadata streaming pipelines using Kafka, Redis, and ZMQ.
- Developed **C++17** video processing modules using **NVIDIA DeepStream**.
- Deployed and debugged services in **Docker**-based **Linux** environments.
